ABSTRACTED-PUB-NO: JP2001244481A

BASIC-ABSTRACT:

NOVELTY - The pressure sensing unit (3), integrated circuit (IC) (4)
and electrically erasable programmable read only memory (EEPROM) (5) are
mounted on the housing (1) along with a capacitor (8) and resistor (9). A
partition wall (1a) divides the mounting locations of capacitor and resistor, from
the other units.

USE - For e.g. pressure sensor, acceleration sensor.

ADVANTAGE - Dispersion of flux during solder connection of capacitor and resistor, towards mounting location of other semiconductor device, is restrained by the provision of partition wall, thereby the mounting reliability is increased.

DESCRIPTION OF DRAWING(S) - The figure shows a perspective view of semiconductor transducer.
